Motor Function.

Gross Motor and Balance: Has an upright posture and steady gait.

Standing on one foot with eyes closed: Maintained Stance for at least five seconds.

Heel toe walking: Maintain heel toe walking along a straight line.

Heel walking: She is able to heel walk

Fine motor tests for upper extremities

Finger to nose test: Able to rhythmically touch the nose

Alternating supination and pronation of hands-on knees: She is able to alternately supinate and pronate hands at a rapid pace.

Fine motor test with lower extremities

Pain sensation: She is able to discriminate between sharp and dull sensations.

Laboratory Data: No data reported.

Imaging results: No image results reported.

Other diagnostic data: No other diagnostic data.

Assessment

Early stages of Pregnancy

Diagnosis/ Differentials

Pertinent Positives:

1. Nausea with vomiting.
2. Food aversions.

Pertinent Negatives:

1. Increased urination.

2. Fatigue.

Other Differential Diagnosis:

Stomach Flu (Gastroenteritis)

Pertinent Positives:

1. Nausea with or without vomiting.
2. Food aversions.

Pertinent Negatives:

1. Diarrhoea
2. Stomach Pain or Cramping
3. Fever.
4. Headache and body aches.

Intestinal blockage

Pertinent Positives:

1. Nausea with or without vomiting.
2. Food aversions.

Pertinent Negatives:

1. Severe Abdominal Pain
2. Pass wind
3. Passing stool

Assessment

Early Pregnancy

Considering the pertinent positive above, a diagnosis of Early Pregnancy is applicable. The 25-year-old presented with an onset of symptoms including nausea with vomiting with food aversions. Review of both the system and signs and symptoms, she may have symptoms related to early pregnancy.

Treatment and Implementation Plan:

1. Encourage the patient to eat before or as soon as they feel hungry. Therefore, a dietary change should be primary intervention (Jin & Bergese, 2020).
2. The patient should also be encouraged to consume aromatic fluids to be helpful in reducing of nausea (Fejzo et al., 2019).
3. The Patient will be administered with Pyridoxine (Vitamin B6) monotherapy with a dosage of 10 to 25 mg orally every six to eight hours (Tsakiridis et al., 2019).

Education/Screening/Follow-up

1. Return for follow-up with symptoms worsen
2. Supportive measures for easy symptom relief.
